Subject: Ecology - Kennewick EE schedule(s)

Caroline / Laurie,

Thanks for a good call this morning. It was helpful to talk through your 2018 projections as well as to put that in context with all of the other exceptional event activities going on throughout the next 12 months.

The two main actions that we will be working on will be:

- PM₁₀ High Wind 2015 for Wallula/Kennewick – We have the demonstration in house. We will aim to have the demonstration drafted in February and then going through the review process and have our determination by May 2018, pending no unforeseen circumstances. This review is being driven by the expected Wallula Maintenance plan in the Fall as well as to come in prior to the EE Mitigation plan required at the same time. I think we should be able to stay within the timeframe mentioned above and there shouldn't be an issue with having the EE ready prior to Jeff's action which I expect will be ~ around this time next year, provided he received the maintenance plan submittal in the Fall.
- PM₁₀ Wildfire 2017 – This demonstration will be challenging provided that there is the need to have the demonstration for Jeff's action as well, and the demo has yet to be developed/submitted and you would like to have it developed in a streamlined fashion and for Wildfire & PM₁₀. We have already had some preliminary conversations in R10, other Regions, and with OAQPS on those two topics and think there is a path forward, but we will still need to take a few more steps. We agree to start talking about a draft in April 2018. Prior to that it would be ideal for Ecology to chat with IDEQ as they will be working on an expedited demonstration for the West Silver Valley and there could be an opportunity for collaboration/coordination. In R10 we will continue to have some conversations on the streamlined approach as well as to what is needed for a Wildfire & PM₁₀ and a streamlined demo in the January through March timeframe.

We also talked about taking a look at the mitigation plan in the March/April timeframe which I think is also doable. We will have continued conversations on the SMP/Prescribed Fire/EEs and Alternate Paths & interest in going below the DV.

I think that covers everything, but let me know if not.
Happy Holidays!

Justin
